INTRODUCTION

The programs presented here are set out for the individual who has a specific need in mind. Because a detailed discussion of these programs would require a text several times the present size of this Library it has been omitted. Individuals who have a specific requirement will have to be at least knowledgeable in the area the program is written about; ie: Statistical programs require the user to be familiar with the terms mean, median, etc. This is because the programs are written in the vernacular of their subject matter. With this knowledge alone, no programming experience on the part of the user is required in order to use any of these programs in most systems. Once it is determined that a particular program may be useful the user merely types in a copy of the BASIC source code exactly as it appears in the program listing. Then follow the instructions for running the program as presented in the Instruction portion of the write up, immediately preceding the program. Also included in the write ups are statements that appear in the source code which may possibly need to be changed to run in the user's computer system; ie: RND statements may have to be changed to FRAND in order to compile in certain systems.

PUBLISHERS NOTE: Appendix B included at the end of Volume V was not mentioned in the preface by the author. We feel this appendix is the most important single item included in this library. We see this appendix as a fore runner that might lead the way toward standardizing a computer language among the manufacturers. This is in addition to the obvious benefits to all users of this Basic Software Library.

TABLE OF CONTENTS

VOLUME ONE

Preface

Part 1 - Business & Personal Bookkeeping Programs

<u>NAME</u>	<u>DESCRIPTION</u>
Bond	Computes price and interest for bond purchases.
Building	Analyzes the cost of building design proposals.
Compound	Computes effective compound interest rates.
Cyclic	Determines seasonal coefficients for two cycles.
Decision 1	Makes a lease/buy decision for you.
Decision 2	Makes a decision on whether to buy a component or make it.
Depreciation	Calculates depreciation by 4 different methods.
Efficient	Cal. the most efficient assignment of resources and/or personnel.
Flow	Predicts your yearly cash flow.
Installment	Performs monthly installment accounting.
Interest	Computes interest accruals, monthly.
Investments	Computes annual rates of return on investments.
Mortgage	Makes a comparison of mortgage terms.
Optimize	Optimizes the layout for a plant, shop, office, etc.
Order	Determines your economic order quantity for inventory items.
Pert Tree	Performs an analysis of a pert network.
Rate	Computes true annual interest rates.
Return 1	Computes lessor's rate of return for uncertain assets.
Return 2	Computes a lessor's rate of return after taxes.
Schedule 1	Schedules N jobs in a shop with M machines.

Part 2 - Games & Pictures

<u>NAME</u>	<u>DESCRIPTION</u>
Animals Four	Teach the computer all about animals.
Astronaut	Land your spaceship on another planet.
Bagel	Advanced number game, numbers may be algebraic, few clues.
Bio Cycle	Calculate your Bio-Life Cycle and plan your days.
Cannons	An advanced war game with big guns.
Checkers	Plays a regulation game of checkers.
Craps	A dice game with hard way odds.
Dogfight	Air fight w/missiles; between a phantom and a mig.
Golf	Plays any number of holes; inc. obstacle course.
Judy	Have a rap session with Judy via your computer.
Line Up	Simple number game, all you have to do is unscramble them.
Pony	Authentic horse race, any number of players.
Roulette	Gamblers delight, plays Las Vegas rules.
Sky Diver	Sky dive on another planet
Tank	A war game between two tanks.
Teach Me	Teach the computer to learn new things.

TABLE OF CONTENTS

VOLUME ONE (CONT.)

PICTURES

<u>NAME</u>	<u>DESCRIPTION</u>
	Introduction
A. Newman	He's absolutely MAD! MAD! MAD!
J.F.K.	Our 35th. president.
Linus	Loveable "Peanuts" character, w/blanket.
Ms. Santa	A modern miss to put a twinkle in your eye.
Nixon	Former "United States" president.
Noel Noel	Christmas or anytime this is a beautiful creation.
Nude	A true work of art for anyone's gallery.
Peace	A message for all seasons.
Policeman	True and blue, he's the law.
Santa's Sleigh	In banner form, perfect for decorating the mantle.
Snoopy	That paragon of Dogdom even plays football.
Virgin	A picture you can read as well as see.

TABLE OF CONTENTS

VOLUME TWO

Part 3 - Math & Engineering Programs

<u>NAME</u>	<u>DESCRIPTION</u>
Beam	Evaluates and selects steel beam sizes.
Conv.	Calculates convolutions.
Filter	Calculates low pass filter components.
Fit	Performs interpolations by spline fits.
Integration 1	Uses Gaussian Quadrature to do integration.
Integration 2	Integrates a function by spline fits.
Intensity	Calc. and plots RF or Acoustic intensities.
Lola	Calc. Long. and Lat. from interstellar fix or distance.
Macro	Simulates a language compiler.
Max. Min.	Calc. the max. & min. values of funct. over a spec. interval.
Navaid	Calc. position from altitude and azimuth of celestial bodies.
Optical	Calculates Blackbody energies, w/filter look-up tables.
Planet	Calculates Sun and Moon positions, hourly.
PSD	Calculates Power Spectral Densities and FFT's.
Rand 1	Generates random numbers between 0 and 1.
Rand 2	Generates random integers between (X) and (Y).
Solve	Solves polynomials by "Bairstows Method".
Sphere Trian	Solves any spherical triangle.
Stars	Locates 50 stars (celestial).
Track	Calc. course and distance and incremental vectors.
Triangle	Solves for all parts of any triangle.
Variable	Finds all variables in Basic programs.
Vector	Calc. final position; given start and motion vectors

TABLE OF CONTENTS

VOLUME TWO (CONT.)

Part 4 - Plotting & Statistics Programs

<u>NAME</u>	<u>DESCRIPTION</u>
Binomial	Calculates binomial probability distributions.
Chi-Sq.	Applies the Chi-Square test to samples.
Coeff	Calc. coefficients of fourier series to apprx. a function.
Confidence 1	Calculates confidence limits on linear regressions.
Confidence 2	Calculates confidence limits for a sample mean.
Correlations	Performs auto and cross correlations with plots.
Curve	Fits 6 different curves by the least squares method.
Differences	Calculates difference of means in non-equal variances.
Dual Plot	Plots two functions on the same sheet.
Exp-Distri	Calculates exponential distributions for a sample.
Least Squares	Performs least squares fit by linear, exp., or power function.
Paired	Compares 2 groups of data using the rank test.
Plot	Plots 6 equations on the same sheet.
Plotpts	Plots data points on standard teletypes.
Polynomial Fit	Performs least squares polynomial fit.
Regression	Performs multiple linear fit with or without transformations.
Stat 1	Finds the mean, variance and standard deviation.
Stat 2	Computes various stat. measures for a variable.
T-Distribution	Calculates normal and T-distributions.
Unpaired	Compares 2 groups of unpaired data.
Variance 1	Performs one way analysis of variances.
Variance 2	Analyzes a variance table of one way random design.
XY	Plots functions of X and Y.

APPENDIX A - BASIC STATEMENT DEFINITIONS

TABLE OF CONTENTS

VOLUME THREE

Part 5 - Advanced Business Programs

<u>NAME</u>	<u>DESCRIPTION</u>
Billing	Performs posting and billing of accounts.
Inventory	Maintains data for inventory records.
Payroll	Computes payrolls with full set of deductions.
Risk	Performs a risk analysis on capital investments.
Schedule 2	Performs the most effi. scheduling of men or resources to loca.
Shipping	Solves the problem of scheduling and assignments.
Stocks	Computes the value of stocks.
Switch	Calculates the effects of a bond switch.

TABLE OF CONTENTS

VOLUME FOUR

PAGE

General Purpose Programs

<u>NAME</u>	<u>DESCRIPTION</u>	
Bingo	An age old favorite. "B9, C23, D4, E13, F21, BINGO!	684
Bonds	Computes the yields for a bond for different periods.	690
Bull	If you ever dreamed of being a Matador, here's your chance.	696
Enterprise	Take charge of the Enterprise while Capt. Kirk is on leave.	702
Football	Authentic NFL version of this well known sport.	710
Funds 1	Calculates long-term predictions of funds.	722
Funds 2	Plots the results of Funds 1.	728
Go-Moku	Ancient Chinese game of chance.	736
Jack	Plays Blackjack, Las Vegas style.	742
Life	Life is truly a battle for survival, a real challenger!	750
Loans	Calculates annuities, loans and mortgages.	763
Mazes	Generates unique maze puzzles for you to solve.	771
Poker	Five card draw - for up to 5 players.	777
Popul	Performs population projections for defined areas.	784
Profits	Determines the profitability of a firms various depts.	787
Qubic	3-Dimensional Tic-Tac-Toe.	791
Rates	Calc. the effective annual interest rate for stated interest.	799
Retire	Calculates your Civil Service Retirement benefits.	803
Savings	Computes savings plan profiles.	808
SBA	Calculates repayment schedules for SBA loans.	811
Tic-Tac-Toe	An all time favorite for young and old alike.	817

TABLE OF CONTENTS

VOLUME FIVE

Experimenter's Programs

<u>NAME</u>	<u>DESCRIPTION</u>
Andy Cap	Draws this famous cartoon character.
Baseball	Plays a full 9 innings of baseball.
Compare	Compares two groups of data.
Confid 10	Determines the confidence limits for a normal population.
Descrip	Provides a description of uni-variant data.
Differ	Computes the diff. of the means for data of equal variance.
Engine	Calculates the otto cycle of engines.
Fourier	This program evaluates fourier series.
Horse	Draws a picture of a horse.
Integers	Computes integers as the sum of other integers.
Logic	Determines conclusions from logic statements.
Playboy	Draws the playboy symbol.
Primes	Factors numbers into their primes.
Probal	Calc. Chi-Sq. and probabilities from 2X2 data sets.

TABLE OF CONTENTS

VOLUME FIVE (CONT.)

Experimenter's Programs

<u>NAME</u>	<u>DESCRIPTION</u>
Quadrac	Solves quadratic equations
Red Baron	Draws a picture of the infamous Red Baron.
Regression 2	Calculates linear regressions.
Road Runner	"Beep! Beep!" Draws a picture of the Road Runner.
Roulette	Computerized "Wheel of Fortune", plays roulette.
Santa	Old Saint Nick appears as jolly as ever.
Stat 10	Calculates quantities for two groups of paired data.
Stat 11	Computes sample statistics.
Steel	Calculates steel beam capacities.
Top	Computes cost for surfacing a road or driveway, etc.
Vary	Performs an analysis of a vari. table; one-way random design.
Xmas	Generates a "SINGING" Christmas card.

APPENDIX B - STATEMENT CONVERSION ALGORITHMS

TABLE OF CONTENTS

VOLUME SIX

A Complete Business System

<u>NAME</u>	<u>DESCRIPTION</u>
Ledger	Maintains ALL Company accounts and generates ALL financial reports. Includes routines for: Pyrl, Inv, Depr, A/R, A/P, Balance Sheets and Profit & Loss statements, etc.

P R E F A C E

The information contained in these pages represents the culmination of a very large project. That of compiling a versatile and complete Software Library that will be of use to a large number of diverse individuals. The programs presented here when combined in a system will represent a very powerful library bank. Such a work as this has been attempted in the past in such areas as cook books, electronic source books, mathematical tables and even computer games. But to date such a collection as this has yet to be offered to the average individual to use as he chooses. The word "at-tempted" was used as no work is ever considered complete by everyone regardless of its thoroughness.

The programs presented here were chosen for their uniqueness and general usefulness. There should be at least one program included that will be of use to every type of individual whether they have access to a computer or not. Computers are a wonderful and very useful tool. Through this Library I hope to interest more people into becoming involved with computers. The Library is written so that little or no computer programming experience is required to invoke any of the programs. The programs that are presented here are all written in the computer language called BASIC. Each program has been successfully run on a G.E. 635 computer. The entire source code is presented as well as a short narrative page which defines the program, tells who might be interested in using it, a brief set of instructions or how to get them and then any limitations in the program are noted. In the limitations section the storage length in K Bytes is given so the prospective user will know how much memory to allow for the program. Where possible the amount of memory space required for full execution is given for the programs, this space is independent of the space already occupied by your BASIC compiler.

The programs are broken down into five sections or parts. Each part deals with a specific type of program. Part 1 contains business type programs. These programs will be of interest to individuals who have businesses, play the stock market, balance their own checkbooks, do installment buying, figure taxes, etc. There are a total of 20 programs in this section. Part 2 is the lighter side of the Library as it contains 16 games and 12 picture programs. No computer library is complete without some fun. Among the games presented in this section is one called Checkers. The game is rather long but it is virtually machine independent as it doesn't use overlay techniques or use files. Most of the other games included here are as exciting as this version of Checkers. Each was chosen so as not to mimic others that the reader may have seen. The pictures are as unusual in their own way as are the games. Most of the pictures are spread over several pages, this was done not only so the reader will need to run the program to see the details of a particular picture but also in the hopes of getting as many of these programs into use as possible. As the picture programs are very simple it is an easy place for the novice to start learning about programming.

Part 3 is comprised of Math and Engineering programs. Some of these programs will be of use to high school students, professional people, sailors, engineers, astronomers, airplane pilots, etc. Most of these programs are very

technical but they can perform every day calculations quickly and easily and they are extremely simple to use. There are 23 general usage programs presented in this section.

Part 4 is made up of Plotting and Statistical Analysis programs. These programs can be readily utilized by a number of people in widely different disciplines from fishermen to statisticians. The data gathered may be from a poll, a census, a test sample or even the number of fish caught on various days. The stat programs will be of invaluable aid to anyone who gathers data of any kind. The plotting routines will be of use to most of the people who use the stat programs or programs in Parts 1 and 3. The plotting is done on any standard teletype or terminal and does not require a special plotter or plotting terminal. There are a total of five direct plotting programs and 18 stat programs in this section.

All of the programs presented here may be run by simply typing the source code as listed, exactly as it is, into your computer. Now before the program will run it will have to be converted into machine code. This is done automatically and requires no forethought except to make certain the operating system you are working in is BASIC. In the larger computer systems you are asked what system you want — to this type BASIC; the smaller systems only have BASIC, in these you are O.K.

Immediately following Part 4 is Appendix A. Here, all of the Basic Statements used throughout these pages are defined. Each statement is explained sufficiently well to enable one unfamiliar with this subset to modify any necessary statements so that the program or programs will compile and execute with the Basic compiler or interpreter available with their particular computer. Most of the Basic compilers available today, that require more than 10K Bytes of storage, will execute all of the programs presented in these volumes with the possible exception of a few of the games and the program "Variable". Multiple line statements are not used in most of the programs and only a few programs use string manipulations extensively. A few of the programs may require more on line storage than is available on some of the small micro computer systems; these longer programs will not be executable due to the limited amount of memory. However most of the programs will execute in 10K Bytes of memory or less, thereby making most of the programs in this Library executable in virtually any Basic speaking computer without any required modifications.

Volume III is comprised of ADVANCED BUSINESS programs, part 5. This volume as well as subsequent volumes are intended to make this Library complete and useful to all individuals.

Each of these programs are written in a subset of the Dartmouth language. The specific subset is that which was used by General Electric on their 635 systems. These programs have operated without problem on a variety of small and large machines even several of the new micro computers. The programs that use string manipulations may require slight modifications before fully executing on some systems. These programs are mainly found in Part 2 — Games.

All of the programs in this Library were written or edited by the author. All of the programs edited by him were given for inclusion, "swapped" for traded, or made public. A few of the original authors of the "swaps" are not known, for this i apologize. The others, unless specifically mentioned in the text, are presented here. In addition i would like to thank the following for their cooperation in making this work possible.

GENERAL

PURPOSE

PROGRAMS

BINGO:

DESCRIPTION

This program simulates that old family favorite "Bingo". The game is played between you and the computer, although another may play using the computer's card. The computer will tumble the balls and select the numbers at random.

USERS

Individuals who enjoy matching their luck against chance will like playing this game. Bingo will also appeal to persons who enjoy a leisure game of chance without the tension of house betting.

INSTRUCTIONS

After the program is loaded into memory type RUN. All necessary instructions and inputs will be prompted as this program is self instructing. For a detailed operation of the game, list the program.

LIMITATIONS

This program uses two dimensional arrays; see line 210. Line 230 contains a Restore statement and line 490 contains a SPC () statement. The SPC () statement is used to set the print position for the Bingo cards and could be replaced by a TAB () statement, if your instruction set does not include the SPC () instruction. A definition of the SPC () statement can be found in Appendix A, in Volume II. The source code requires 6K Bytes of memory for storage and the program will execute in most 8K Basic compilers in only 7K Bytes of memory, this is in addition to the amount of memory required to store your Basic compiler.

BONDS:

DESCRIPTION

Bonds calculates bond yields to maturity for a bond. The yields are computed before and after taxes. The user must supply the tax rates, the redemption value, price, annual coupon and the maturity for the bond before any calculations are made. This program is more comprehensive than the program BOND.

USERS

Persons or companies interested in investing in bonds, or already having bond investments could benefit from using BONDS.

INSTRUCTIONS

The input data for the bond may be entered in data statements prior to program execution or it may be entered after execution through the prompting provided in the program. After the program has been loaded into memory, type RUN. Bonds will then ask if you want instructions. There are three valid responses to this question: YES, NO and DATA. If you answer YES, the program will prompt for the required inputs. If your response is NO, then you are expected to enter the seven (7) required data inputs. If the response is DATA, the program will expect to find the data previously entered in Data Statements prior to operation. Data for a sample problem is contained in line 190.

LIMITATIONS

The program should execute in most Basic compilers with 5K Bytes of available memory. The source code requires 4K Bytes of memory for storage.

SAMPLE PROBLEM

TO FIND THE BEFORE AND AFTER TAX YIELDS FOR A BOND, ASSUMING THE FOLLOWING DATA: 1 - A \$5 ANNUAL COUPON; 2 - REDEMPTION VALUE OF \$100; 3 - MATURITY OF 6 YEARS 5-1/4 MONTHS; 4 - A PRICE OF \$97; AND TAX RATES OF 50% ON INTEREST RECEIPTS AND 25% ON CAPITAL GAINS.

EXAMPLE #1

RUN

DO YOU WANT INSTRUCTIONS FOR ENTERING DATA ?YES

ENTER THE FOLLOWING DATA ITEMS

ITEM 1	ANNUAL COUPON (IN DOLLARS)	?5
ITEM 2	PROCEEDS ON REDEMPTION	?100
ITEM 3 & 4	MATURITY IN YEARS, MONTHS	?6,5.25
ITEM 5	PRICE	?97
ITEM 6 & 7	TAX RATES ON INCOME, CAP GNS	?5, .25

COUPON	5	REDEMPTION AT	100	PRICE	97
MATURITY	6 YEARS 5.25 MONTHS				
TAX RATES	.5 ON INCOME			.25 ON CAPITAL GAINS	

YIELD BEFORE TAX 5.560054 PERCENT

YIELD AFTER TAX 2.907394 PERCENT

EXAMPLE #2

RUN

DO YOU WANT INSTRUCTIONS FOR ENTERING DATA ?NO
ENTER ITEMS 1 THROUGH 7 ?5,100,6,5.25,97,.5,.25

COUPON	5	REDEMPTION	100	PRICE	97
MATURITY	6 YEARS 5.25 MONTHS				
TAX RATES	.5 ON INCOME			.25 ON CAPITAL GAINS	

YIELD BEFORE TAX	5.560054 PERCENT
YIELD AFTER TAX	2.907394 PERCENT

EXAMPLE #3

RUN

DO YOU WANT INSTRUCTIONS FOR ENTERING DATA ?DATA

COUPON	5	REDEMPTION	100	PRICE	97
MATURITY	6 YEARS 5.25 MONTHS				
TAX RATES	.5 ON INCOME			.25 ON CAPITAL GAINS	

YIELD BEFORE TAX	5.560054 PERCENT
YIELD AFTER TAX	2.907394 PERCENT

BULL:

DESCRIPTION

In this program you will be transformed into a Matador. Have you ever been a Matador? Well, in any event you will have the opportunity to test your skill and courage in killing a bull or in the reverse being killed by a Bull!

USERS

Anyone who is looking for a good, fast, moving game where the probabilities for "loosing" or "winning" are Equal, will enjoy playing Bull. This game is extremely unique and is full of unexpected events.

INSTRUCTIONS

All instructions necessary for execution are included in the program. After the program has been loaded, type RUN; you will then be asked if you want instructions. If you type NO to this question the game will commence, any other response will yield the full set of instructions. The game is self contained and provides for all necessary inputs automatically.

LIMITATIONS

This program uses multiple line statements throughout, i.e.: lines 460, 730, 780, 970, 1030, etc. In addition, line 413 contains a Restore statement. The source code requires 5K Bytes of memory for storage and 6K Bytes for execution.

DO YOU WANT INSTRUCTIONS?YES

HERE IS YOUR BIG CHANCE TO KILL A BULL

ON EACH PASS OF THE BULL, YOU MAY TRY
0=VERONICA(DANGEROUS INSIDE MOVE OF THE CAPE),
1=LESS DANGEROUS OUTSIDE MOVE OF THE CAPE, OR
2=ORDINARY SWIRL OF THE CAPE

INSTEAD OF THE ABOVE, YOU MAY TRY TO KILL THE BULL
ON ANY TURN: 4=OVER THE HORNS, 5=IN THE CHEST;
BUT IF I WERE YOU,
I WOULDN'T TRY IT BEFORE THE SEVENTH PASS

THE CROWD WILL DETERMINE WHAT AWARD YOU DESERVE
POSTHUMOUSLY IF NECESSARY
THE BRAVER YOU ARE, THE BETTER THE AWARD YOU RECEIVE

THE BETTER A JOB THE PICADORES AND TOREADORES DO,
THE BETTER YOUR CHANCES ARE

YOU HAVE DRAWN A GOOD BULL

THE PICADORES DID A EXCELLENT JOB

THE TOREADORES DID A EXCELLENT JOB

PASS NUMBER 1
THE BULL IS CHARGING AT YOU! YOU ARE THE MATADOR--
DO YOU WANT TO TRY TO KILL THE BULL?YES
IT IS THE MOMENT OF TRUTH. HOW DO YOU TRY TO KILL THE BULL?1
YOU PANICKED. THE BULL GORED YOU.
YOU ARE DEAD

THE CROWD AWARDS YOU NOTHING

DO YOU WANT TO TRY AGAIN?NO

ENTERPRISE:

DESCRIPTION

The federation is in dire need of a commander to takeover the Enterprise while Captain Kirk is on leave. Prior military experience helpful as the Enterprise and a Klingon battle cruiser face each other in a simulated battle mission on your computer. Designed to test your abilities, this version of the game will require considerable skill on your part to avoid total destruction. GOOD LUCK!

USERS

Starfleet Captains and other individuals interested in keeping the Star Trek tradition alive and well, as well as having a lot of fun, will find this simulation space battle both exciting and fascinating. ****WARNING**** This game may be habit forming — players have been known to become addicted!

INSTRUCTIONS

Type RUN after the program is loaded and the program will ask you if you want instructions. The program is self instructing and easy to use.

LIMITATIONS

Line 230 contains a TAB () statement, 670 an ON_GOTO statement and 2270 a Restore statement. Lines 330 and 2810 contain Multiple line statements. The source code is 7K Bytes long and the program will execute in 8K Bytes of memory. For those of you experiencing extreme difficulty in bringing back the Enterprise in one piece, the weapon control constraints are located in lines: 700, 800, 870, 2010 and 2020.

FOOTBALL:

DESCRIPTION

If you're a football fan this program should be right up your 50 yard line. This is an authentic football game simulation. The game adheres to the NFL rules and the play generated is as stimulating as you're up too.

USERS

NFL and AFL fans will find this game very enjoyable. The game will appeal to anyone who has an interest in football, regardless of their expertise.

INSTRUCTIONS

The program contains all necessary prompts and instructions for playing the game. To use -- load the program and then type RUN. For detailed program operations list the program before playing.

LIMITATIONS

This program uses the DEF FNX () function and the FNX () function extensively, starting in program line 1090. Line 2030 contains an ABS () statement and line 6080 contains a Restore statement. The source code requires 11K Bytes for storage and 13K Bytes of memory for storage and execution.

THIS IS PRO-STYLE FOOTBALL. YOU WILL BE THE
QUARTERBACK AND DEFENSIVE SIGNAL-CALLER FOR YOUR
TEAM. YOU HAVE 14 OFFENSIVE PLAYS (8 RUNS; 6 PASSES)
AND 4 DEFENSIVE ALIGNMENTS.

THERE IS A TWO-MINUTE WARNING BEFORE THE END
OF EACH HALF. FIVE TO SEVEN PLAYS ARE LEFT IN THE
HALF AT THAT POINT.

DO YOU WANT A LIST OF PLAYS (YES OR NO)?YES
CALL PLAYS AS FOLLOWS:

RUNS:

1=DIVE; 2=OFF TACKLE; 3=SCISSORS; 4=TRAP
5=SWEEP; 6=OPTION; 7=REVERSE; 8=DRAW

PASSES:

9=SIDELINE; 10=LOOK-IN; 11=ROLLOUT
12=SCREEN; 13='FLY'; 14='POST'

KICKS:

15=FIELD GOAL; 16=PUNT; 17=QUICK KICK

CALL DEFENSES AS FOLLOWS:

1='PRO' (4-3); 2='OKIE' (5-2); 3='SHORT-YDG'; 4='PREVENT'

FUNDS 1:

DESCRIPTION

Funds 1 performs financial projections for an investor. Funds 2 is used to plot the data from this program. The program is normalized to allow various investment plans to be compared.

USERS

Individuals and companies engaged in financial speculation and investment would have use for this program. In addition, it could be related to any homeowner, as a home is an investment. With this program one could do equity projections on a home for the purpose of loans or additional investment value.

INSTRUCTIONS

The program is self prompting and requires no maintenance prior to execution. The program normalizes all investments to \$100 and makes projections for a 50 year period. In order to correct for other investments the investment return need only be scaled by the ratio of \$100 to the true \$ investment. For example: if the investment was \$14,100 then the investment return projections should be multiplied by 141, and so forth. The program can be listed for additional operating information.

LIMITATIONS

Funds 1 uses two dimensional arrays, starting in line 100. Line 910 contains a TAB () statement and starting in line 950 Print Using statements are used. The source code requires 4K Bytes for storage. Execution is a function of the length of the projection as set in the DIM statement in line 100. With the present setting the program will require 37K Bytes of memory for execution. This amount can be significantly reduced if the A(32,100) table is reduced, however this will reduce the length of the projection. The program is presently set for operation without a storage file for the tables. If the results are not to be plotted with Funds 2, then there is no loss, however if Funds 2 is to be utilized, it would be advantageous to convert this program to use a storage file. Instructions for utilizing a storage file are given under Funds 2. This program has been written without file statements as most small system compilers do not have this statement and the object of this library is to be as universally compatible as possible.

FUNDS 2:

DESCRIPTION

This program is the plotting routine for Funds 1. It may also be used to plot other data bases, if they are formatted for this program's input.

USERS

Users of Funds 1 will have the most use for this program, however Funds 2 can be used to plot the results of any financial analysis.

INSTRUCTIONS

This program is also self prompting and will ask for all necessary inputs. For additional information list Funds 1 and Funds 2.

LIMITATIONS

As in Funds 1 this program uses two dimensional arrays, starting in line 100. In line 1331 the TAB () statement appears and is used throughout the program. The source code stores in 5K Bytes of memory. The execution length is a function of the reserved table size. With the DIM statements as presently set, it will require 38K Bytes of memory for storage and execution. This amount may be significantly reduced by reducing the "A" table. Due to the length of the tables it may be more convenient to store the data from Funds 1 in a use file and then have Funds 2 read this use file. If your compiler has file statement capability, the mods would be:

```
FUNDS 1      120  FILES:  PLOT 1
              128  Scratch #1
              760  Write #1: N, N1, 11
              790  Write #1: A(I,J)
```

```
FUNDS 2      120  FILES:  PLOT 1
              125  Read #1: N, N1, 11
              150  Read #1: A(I,J)
              155  Rem
```

GO-MOKU:

DESCRIPTION

This program is a simulation of an old Chinese game. It is played on a 9 x 9 board and the object of the play is to place 5 in a row without being blocked by your opponent. Your opponent is the computer.

USERS

If you like a game offering a fair degree of skill you will enjoy playing GO-MOKU. The game can be analyzed and the methodology may be reduced to an algorithm as in TIC-TAC-TOE for those so inclined.

INSTRUCTIONS

Upon execution the program prints out all necessary instructions and game rules. All inputs will be prompted by the game program. The playing board will be printed after each move.

LIMITATIONS

This program uses two dimensional arrays; see line 90. The source code is 5K Bytes long and the game will execute in 11K Bytes of memory.

```

10 REM THIS IS THE GAME  G-H-HUKU

JACK:

DESCRIPTION

Calling all gamblers or would be gamblers — this is a simulation of the game of Black-Jack. The program adheres to the same house rules as used in the Las Vegas gambling casinos and is an exceptionally realistic version of the game.

USERS

Persons who like to play cards, gamble, or just play games will enjoy JACK, and if you've always dreamed of sitting in a casino in Vegas playing cards, with this program only the setting will be different. The winnings obtained with this program are very close to those obtained in the real casinos, except you can't spend your winnings but then like wise you don't have to make monthly payments to repay your losses.

INSTRUCTIONS

To play Jack simply type RUN after the program is loaded. The program will ask if you would like instructions. A response of "Ø" will start the game immediately, any other numeric response will cause a detailed listing of the instructions to be printed. The program is instructional and will prompt for all inputs.

LIMITATIONS

The source code requires 7K Bytes of memory for storage and 8K for execution.

>ITEMS:

- *I PAY 1.5-TO-1 ON BLACKJACK
- *I DON'T RECOGNIZE 5-CARDS-AND-UNDER
- *YOU MAY DOUBLE DOWN ON A SPLIT HAND
- *YOU DON'T LOSE ON A TIE HAND...WE PUSH

<<<GOOD LUCK>>>

LIFE:

DESCRIPTION

This program is a very detailed version of the game of "Life" as written up in the October 1970 issue of Scientific American. It has been modified to allow one to play either against the computer or against another player. The object of the game is to destroy your opponents life units while saving at least some of your life units. This is more than just a game as it actually follows patterns found in real life environments.

USERS

Game enthusiasts of all types will find something of interest in this game. "Life" will be of special interest to individuals involved with population projections, economic growth situations, and the problems related to over and under developed areas.

INSTRUCTIONS

The program is self prompting and should be listed for a full set of instructions before playing your initial game. Program instructions are available when the program is initiated.

LIMITATIONS

The source code for this simulation requires 13K Bytes of memory for storage and 21K for execution, this does not include the amount of memory required for storage of your Basic compiler. This program uses two dimensional arrays; see line 106. Line 108 has a MAT A = ZER and 110 has a MAT B = ZER. Lines 104 and 122 contain Restore statements.

BECOME A TWO-DIMENSIONAL TYRANT

EXPERIENCE THE JOY OF CONFLICT AS YOU DETERMINE THE DESTINY
OF YOUR WORLD OF LIFE-UNITS

WATCH HELPLESSLY AS YOUR LIFE-UNITS AIMLESSLY BLUNDER ABOUT!

PLAY THE 'BATTLE OF LIFE'!

DO YOU WANT A BASIC EXPLANATION OF THE GAME ?Y

!!! PLEASE, ANSWER YES OR NO !!!

ANSWER ?YES

THE GAME 'BATTLE OF LIFE' IS BASED ON THE GAME LIFE.

LIFE-UNITS ARE COUNTERS ON AN INFINITE GRID. THE PRESENCE OF A LIFE-UNIT IS INDICATED AS A ZERO ON THE PRINTED GAME BOARD. ON THE BOARD EACH LIFE-UNIT IS SURROUNDED BY A MAXIMUM OF EIGHT NEIGHBORS. (ALL ADJACENT UNITS ARE COUNTED, INCLUDING DIAGONAL NEIGHBORS)

THE GAME PROCEEDS FROM ONE GENERATION TO ANOTHER. THE LIFE-UNITS THEMSELVES DO NOT MOVE, THEY WILL EITHER LIVE OR DIE. THE CURRENT POPULATION OF AN AREA WILL DETERMINE THE POPULATION OF THE NEXT GENERATION. EXISTING LIFE-UNITS MAY DIE, OR NEW ONES MAY BE BORN IN EMPTY SPACES, ACCORDING TO THE FOLLOWING RULES:

DEATH - A LIFE-UNIT WILL DIE IF IT HAS LESS THAN TWO NEIGHBORS... (FROM ISOLATION); OR MORE THAN THREE NEIGHBORS... (FROM OVERCROWDING).

LIFE - A LIFE-UNIT WILL LIVE IF IT HAS TWO OR THREE NEIGHBORS.

BIRTH - A NEW LIFE-UNIT WILL BE BORN IN AN EMPTY SPACE THERE ARE EXACTLY THREE NEIGHBORING LIFE-UNITS.

EXAMPLES:

0 0

THE ABOVE LIFE-UNITS WILL BOTH DIE BECAUSE EACH HAS ONLY ONE NEIGHBOR.

0 0
0 0
0 0

TWO OF THE ABOVE LIFE-UNITS WILL DIE FROM OVERCROWDING. TWO NEW LIFE-UNITS WILL BE BORN.
THE NEXT GENERATION OF THE ABOVE GROUP WILL BE:

```

  0 0
0    0
  0 0

```

THIS PATTERN IS STABLE, EACH LIFE-UNIT HAS TWO NEIGHBORS--SO IT LIVES --- AND NO SPACE HAS EXACTLY THREE NEIGHBORS--SO NO NEW LIFE-UNITS ARE BORN.

SOME PATTERNS OSCILLATE - THIS ONE IS CALLED THE BLINKER:

```

  0          0
  0    ->    0 0 0    ->    0
  0          0

```

NOTICE THAT THE TWO UNITS ON THE END OF THE BLINKER DIE, AND THAT THE ONE IN THE CENTER LIVES BECAUSE IT HAD TWO NEIGHBORS. TWO NEW LIFE-UNITS WERE BORN NEXT TO THE CENTER BECAUSE THEY HAD THREE NEIGHBORS.

SOME PATTERNS ARE STABLE, LIKE THESE:

```

          0
    0 0      0  0      0  0 0
    0 0      0  0      0 0  0
          0 0

```

THESE ARE CALLED THE BOX, THE LEAF, AND THE SNAKE.

SOME PATTERNS REPRODUCE THEMSELVES AND 'MOVE' ACROSS THE BOARD. THIS ONE IS CALLED A GLIDER:

```

-----
:- 0 - - :   :- - - - :   :- - - - :   :- - - - :   :- - - - :
:- - 0 - : -> :- 0 - 0 - : -> :- - 0 - : -> :- 0 - - : -> :- - 0 - :
:0 0 0 - :   :- 0 0 - :   :- 0 - 0 - :   :- - 0 0 :   :- - - 0 :
:- - - - :   :- 0 - - :   :- 0 0 - :   :- 0 0 - :   :- 0 0 0 :
-----

```

NOTICE THAT THE GLIDER 'MOVES' ONE SQUARE DOWN AND ONE SQUARE TO THE RIGHT EVERY FOUR GENERATIONS; IT IS SAID TO MOVE AT ONE-QUARTER OF THE SQUARE-ROOT OF TWO TIMES THE SPEED OF LIGHT.

THE PLAY:

MY GAME, 'LIFE', IS PLAYED ON A BOARD 11 X 30. EACH PLAYER HAS A UP FOR YOU BY THE COMPUTER AT THE START OF EACH GAME. EACH PLAYER TRIES TO DESTROY THE STABLE PATTERNS IN HIS OPPONENTS HOME REGION.

THE METHOD OF ATTACK IS VARIABLE. SOME TIMES GLIDERS OR SIMILAR PATTERNS ARE USED. SOMETIMES PATTERNS WHICH ARE KNOWN TO EXPAND ARE EMPLOYED. IN ANY CASE THE ONLY CHANCE THE PLAYERS WILL HAVE TO PLAY THEIR STRATEGY WILL BE AT THE OUTSET OF THE GAME. IT IS THE INITIAL PLAN OF THEIR WORLD WHICH WILL WIN OR LOSE THE BATTLE OF LIFE!

DO YOU WANT A LISTING OF THE RULES ?YES

HERE ARE THE RULES:

EACH PLAYER HAS A HOME REGION WHICH HE TRIES TO DEFEND. AT THE SAME TIME, HOWEVER, HIS PLAN MUST DESTROY HIS OPPONENTS HOME REGION. THUS EACH PLAYER MUST SET UP HIS INITIAL PLAN OF HIS WORLD WITH A PHILOSOPHY OF DEFENSE, OFFENSE, OR ATTEMPT BOTH.

EACH PLAYER MAY USE UP TO THIRTY LIFE-UNITS IN HIS INITIAL PATTERN. THIS IS IN ADDITION TO THE HOME REGIONS WHICH I HAVE ALREADY SET UP FOR EACH PLAYER. A PLAYER MAY PUT THE LIFE-UNITS OF HIS INITIAL PATTERN ON HIS SIDE OF THE BOARD ONLY. FOR PLAYER ONE THIS IS FROM Y = 4 TO Y = 15, (THE REGION FROM Y = 1 TO Y = 3 IS RESERVED FOR THE HOME REGION. DO NOT TRY TO PLACE ANY LIFE-UNITS IN THIS AREA!)

THE BOARD INITIALLY LOOKS LIKE THIS:

```

:-----:
30: 0 0 - - - 0 0 - 0 0 - :
: 0 - 0 - 0 - 0 - 0 - 0 :
: - 0 0 - 0 0 - - - 0 0 :
: - - - - - - - - - - :
: - - - - - - - - - - :
25: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
20: - - - - - - - - - - :

: - - - - - - - - - - :
15: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
10: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
: - - - - - - - - - - :
5: - - - - - - - - - - :
: - - - - - - - - - - :
: 0 0 - - - 0 0 - 0 0 - :
: 0 - 0 - 0 - 0 - 0 - 0 :
1: - 0 0 - 0 0 - - - 0 0 :
:-----:
      1      3      5      7      9     11

```

PLAYER ONE HAS THE BOTTOM OF THE BOARD AS IT WAS PRINTED OUT.
 PLAYER TWO (WHO MIGHT BE THE MACHINE) HAS THE TOP OF THE BOARD.

IF YOU WANT TO PLAY AGAINST THE COMPUTER, TYPE 'MACHINE' WHEN I
 ASK YOU FOR PLAYER TWO'S NAME.

WHAT IS PLAYER ONE'S NAME ?

LOANS:

DESCRIPTION

This program computes annuities for both payments and withdrawals for loans, mortgages, savings, etc.

USERS

Householders, individuals who have checking or savings accounts or have outstanding loans or are contemplating any of the above will be able to put this program to good use.

INSTRUCTIONS

Upon execution the program will ask if you want instructions. LOANS is fully documented and will prompt for all necessary data while the program is running.

LIMITATIONS

Line 100 contains a DEF FNX () statement; this function is used throughout the program. In line 1200 LOG () and 1260 ABS () statements appear. The source code will require 6K Bytes of memory for storage. Execution will require an additional 1000 Bytes of memory for table storage for a total of 7K Bytes for execution.

MAZES:

DESCRIPTION

This program generates uniquely different mazes in two dimensions. The maximum size of a maze is 23 x 25. Each maze is distinctly different from the preceding one and has only ONE solution.

USERS

Puzzle and riddle fans will enjoy this game. The complexity of the mazes generated is varied according to the dimensions but all should provide fair competition for the initiated as well as the uninitiated player.

INSTRUCTIONS

Type RUN and the program will print out a full list of instructions and then ask you for the size of the maze you would like to construct. The greater the dimensions of the maze the more complex is its' solution.

LIMITATIONS

Mazes uses two dimensional arrays to generate the patterns. The source code requires 6K Bytes for storage. With the DIM statement in line 240 set at (23, 25) the program will require 18K Bytes of memory for execution. If this DIM statement is reduced the program will execute in less memory space but the mazes generated will be correspondingly less complex.

POKER:

DESCRIPTION

If you like card games and would like to play for high stakes or low but just haven't got the extra money, this is the way to go! This program simulates a five card draw poker game. Up to five players are allowed and the computer is the dealer and keeps everybody honest.

USERS

Anyone who enjoys a good poker game will enjoy this program. If you've always wanted to try your hand at poker this is one sure way of doing it safely and for the old pro its' going to be a little bit harder to bluff, but go ahead and try.

INSTRUCTIONS

To use this program simply type the word RUN. The game will then commence. The game is self instructing and will ask for all necessary inputs. For additional information list Poker.

LIMITATIONS

With the exception of the ABS () statement in line 2230 the program should immediately execute in any basic speaking computer with at least 8K of available memory. The source code for Poker will require 7K Bytes of memory for storage.

POPUL:

DESCRIPTION

This program calculates and prints yearly population projections for an area. The projection may be printed for a number of years, up to 99. The program uses compound interest formulas to generate the projections.

USERS

Individuals interested in the economics, social problems and growth factors of an area will find this program very helpful. This could include civic groups, home owners, engineers, environmentalists, and local government consultants. The area of interest may be a fish tank, back yard, or entire city.

INSTRUCTIONS

This program requires no special initialization prior to execution, just load in the program and type RUN. Popul is self instructional and will request all input necessary for operation. List the program for additional program information.

LIMITATIONS

Popul will require 3K Bytes of memory for storage and 5K for program execution. This program should execute without problems in most 4K Basic compilers.

PROFITS:

DESCRIPTION

PROFITS is used to analyze the profit from various departments of a company. With slight modification this program can analyze various household expenses such as: phone, heat, light, groceries, etc. versus income. For business use the amount of inventory and its' rate of change is taken into consideration when determining the profit or profit margin.

USERS

Individuals who are cost conscious put this program to good use. It could be used to analyze house-hold spending versus income. These results could be used to streamline or trim the budget. Businessmen as well as efficiency experts could benefit from using this program by increasing their departments' profit margins.

INSTRUCTIONS

List the program for detailed instructions. Profits is self prompting and will request all needed information while executing.

LIMITATIONS

The TAB () statement is used throughout this program starting in line 320. This program will store and execute in 4K Bytes of memory in most systems, excluding the amount of memory required to store the basic compiler.

QUBIC:

DESCRIPTION

This is the game of TIC-TAC-TOE in three dimensions. The game is played on a 4x4x4 board. The playing board may be printed before each move, if desired. This is a very complex game and it will be extremely difficult for you to beat the computer, although I have seen it done where the player solves the algorithms with a calculator before each move.

USERS

Game enthusiasts and problem solvers will find Qubic both challenging and interesting.

INSTRUCTIONS

Type RUN and Qubic will ask you if you want instructions. Each move codes a 3 digit number specifying the level and location of the move. All necessary prompts and instructions will be generated by the program during execution.

LIMITATION

This game uses two dimensional arrays; see line 315, throughout. The source code requires 7K Bytes for storage and will execute in 12K.

CUBIC

DO YOU WANT INSTRUCTIONS ?YES

THE GAME IS TIC-TAC-TOE IN A 4 X 4 X 4 CUBE.
EACH MOVE IS INDICATED BY A 3 DIGIT NUMBER, WITH EACH
DIGIT BETWEEN 1 AND 4 INCLUSIVE. THE DIGITS INDICATE THE
LEVEL, ROW, AND COLUMN, RESPECTIVELY, OF THE OCCUPIED
PLACE.

TO PRINT THE PLAYING BOARD, TYPE 2 (ZERO) AS YOUR MOVE.
THE PROGRAM WILL PRINT THE BOARD WITH YOUR MOVES INDI-
CATED WITH A (Y), THE MACHINE'S MOVES WITH AN (M), AND
UNUSED SQUARES WITH A ().

TO STOP THE PROGRAM RUN, TYPE 1 AS YOUR MOVE.

DO YOU WANT TO MOVE FIRST ?0

INCORRECT ANSWER. PLEASE TYPE REMYESREM OR REMNOREM. ?NO

MACHINE MOVES TO 111

YOUR MOVE ?3

RATES:

DESCRIPTION

This program calculates effective annual interest rates for various interests with different compounding times.

USERS

Persons planning on spending money who may have a choice of financing plans can use this program to determine the true or effective interest they will be repaying, i.e. Businessmen, Housewives, Homeowners, etc.

INSTRUCTIONS

After the program has been loaded into memory type RUN and the program will prompt for all necessary information.

LIMITATIONS

Rates uses two dimensional arrays; see line 530. Line 550 has a MAT INPUT statement as does line 670. Line 770 contains a TAB () statement and lines 490 and 1020 contain print using statements. The program will require 2K Bytes to store the source code and 7K Bytes for execution.

RETIRE:

DESCRIPTION

This program computes the rate of retirement pay for a civil service worker. It can be modified to generate retirement schedules for other plans as desired.

USERS

Persons desiring to plan for their retirement will find this program very beneficial. In addition to providing you with a retirement pay schedule it can be very useful Now in planning or deciding which job to take or what position or level of current income to work towards. While this program has been set up for government workers it can easily be modified to encompass any retirement plan beigh offered by an employer.

INSTRUCTIONS

Upon execution the program will ask if you want instructions. Type 1 for Yes or 0 for No. The program will request all necessary data as needed to determine your retirement benefits.

LIMITATIONS

Starting in line 1020 the DEF FNX () statement is used. In addition the PRINT USING statement is used extensively through out this program. RETIRE will require 6K Bytes of memory for program storage and will execute in most 8K Basic compilers with 7K Bytes of available memory.

SAVINGS:

DESCRIPTION

This program computes the amount of money an investment will accumulate over a period of years, given the interest rate, compounding period and the type of investment.

USERS

Anyone who invests or saves money will find this program can help in determining the most advantageous place to invest your money. This would include homeowners, businessmen and companies, as well as anyone who has a savings account.

INSTRUCTIONS

After the program has been loaded into memory type RUN. The program will then print out a full set of user instructions.

LIMITATIONS

This program should execute in any Basic speaking computer with 3K available memory. Two kilo Bytes are required for program storage and Savings should execute without incident in most 4K Basic compilers.

SAVINGS

SAMPLE PROBLEM

TO CALCULATE THE TOTAL AMOUNT OF MONEY THAT WILL HAVE ACCUMULATED AFTER A FOUR YEAR PERIOD WITH AN INITIAL INVESTMENT OF \$6000. THE INTEREST RATE IS 6% COMPOUNDED FOUR TIMES PER YEAR. AN ADDITIONAL \$200 HAS BEEN DEPOSITED AT THE BEGINNING OF THE SECOND, THIRD AND FOURTH YEARS.

SOLUTION

RUN

THIS PROGRAM CALCULATES THE AMOUNT OF MONEY THAT WOULD ACCUMULATE AFTER N YEARS AT AN ANNUAL INTEREST RATE R COMPOUNDED T TIMES PER YEAR, WHEN THE INITIAL AMOUNT IS P AND AN AMOUNT D IS ADDED AT THE BEGINNING OF EACH SUBSEQUENT YEAR. NOTE THAT P AND D ARE GIVEN IN DOLLARS, N AND T MUST BE INTEGERS, AND R IS GIVEN AS A PERCENTAGE.

WHAT ARE P,D,N,T,R 26000,200,4,4,6

AFTER 4 YEARS, 6000 DOLLARS INVESTED AT 6 PERCENT COMPOUNDED 4 TIMES PER YEAR, WITH THE ADDITION OF 200 DOLLARS PER YEAR, YIELDS A TOTAL OF 8290.608 DOLLARS

MORE DATA (1=YES, 0=NO) ?1

WHAT ARE P,D,N,T,R 26000,0,4,4,6

AFTER 4 YEARS, 6000 DOLLARS INVESTED AT 6 PERCENT COMPOUNDED 4 TIMES PER YEAR, WITH THE ADDITION OF 0 DOLLARS PER YEAR, YIELDS A TOTAL OF 7613.913 DOLLARS.

MORE DATA (1=YES, 0=NO) ?1

WHAT ARE P,D,N,T,R 20,200,4,4,6

AFTER 4 YEARS, 0 DOLLARS INVESTED AT 6 PERCENT COMPOUNDED 4 TIMES PER YEAR, WITH THE ADDITION OF 200 DOLLARS PER YEAR, YIELDS A TOTAL OF 676.6948 DOLLARS.

MORE DATA (1=YES, 0=NO) ?1

WHAT ARE P,D,N,T,R 26000,200,4,1,5.25

AFTER 4 YEARS, 6000 DOLLARS INVESTED AT 5.25 PERCENT COMPOUNDED 4 TIMES PER YEAR, WITH THE ADDITION OF 200 DOLLARS PER YEAR, YIELDS A TOTAL OF 8027.977 DOLLARS

MORE DATA (1=YES, 0=NO) ?0

SBA:

DESCRIPTION

SBA calculates a loan repayment schedule for "Small Business Administration" loans. The printout covers the entire period of the loan utilizing a tabular format for the various categories and provides a comprehensive yearly summary statement.

USERS

Businessmen who are interested in obtaining SBA funds for use in their business will find this program very informative and far less costly to use than an accountant. As small businesses are measured in terms of dollar income per operating unit, this means that even large companies may be able to obtain SBA loans for their various offices around the country.

INSTRUCTIONS

The program is self prompting but should be listed for detailed input instructions. After it is loaded into memory and listed, if desired, type RUN.

LIMITATIONS

Line 340 contains a DEF FNX () statement, line 380 an ABS () statement, line 630 a Change statement, line 650 a FNEND statement and line 1180 a TAB () statement. Some of these statements may not be in your Basic compiler but if you have an 8K version of Basic these statements may easily be converted to your compiler's statements. Statement definitions are shown in appendix A at the end of Volume II. The source code for SBA requires 5K Bytes for storage and will execute in 6K Bytes of memory.

TIC TAC:

DESCRIPTION

This is a computer simulation of the game TIC TAC TOE. The game is played on a standard 3 x 3 board. The computer randomly selects who will make the first play and is your opponent. This is a very simple version of a very old, old game and can provide hours of entertainment for both the novice player and the expert.

USERS

This is a very good starter game for the novice computer game player and its a nice change of pace for the expert who has been frustrated by a few of the more complex games.

INSTRUCTIONS

Load the program into memory and type RUN. The game board will be printed at the beginning of the first game only. It may be necessary to keep a copy of the game board until its arrangement becomes familiar. To play you type in the number of the square where you would like to place your X. The computer will tell you which square it will occupy based on prior moves.

LIMITATIONS

Line 1030 contains a TAB () statement, 1070 MAT Read, 1080 MAT C = ZER and 1090 MAT B = ZER. This program uses two dimensional arrays for operation; see line 1060. The source code stores in 2 Bytes of memory and the program will execute in 3K Bytes of memory, excluding the space required for your Basic compiler. TIC TAC should execute in most 8K Basics with little or no problems.
